INTERVIEW

*Saci Industrie*

SACI Industrie works in the household liquid detergent sector as one of the main international private label players.

Having been in business for almost 100 years, SACI has made Innovation – Flexibility – Quality the three pillars of its constant growth, with a focus on customers which has always been a hallmark of the company ever since it was founded way back in 1925.

This company from Ponte San Giovanni (PG – Italy) now boasts some top numbers: 17 production lines, 250 employees, 205,000 m2 of total surface area, 1/2 million pieces produced a day and 150 million a year.

SACI is a global benchmark for the home care sector: its manufacturing philosophy is based on deep vertical integration, proprietary technologies and cutting-edge machinery.

It was its great focus on innovative, high-tech solutions that led SACI to choose P.E. Labellers to provide the best labelling for the millions of bottles which the company releases onto the market.

The partnership between the two companies has been going on for ten years: SACI Industrie now has 8 P.E. labelling machines. This mix of high-performance and ergonomic labelling solutions attaches labels with hot-melt and adhesive technology, using machine vision systems and special on-board solutions to provide the best labelling and with non-stop production for many different types of containers on the same machine.

P.E. Labellers offers its technological innovation for a manufacturer with the highest standards, which aims to keep its customers satisfied in 29 countries around the world with flawlessly labelled products.
