

OLEIFICIO ZUCCHI CHOOSES P.E. LABELLERS

“ FLEXIBILITY IS A TOP PRIORITY FOR ZUCCHI, GIVEN THE MULTITUDE OF VARIATIONS DEMANDED BY THE MARKET: THE LABELING PHASE MUST MEET THIS NEED FOR VERSATILITY. THESE MACHINES ACCOMMODATE A WIDE VARIETY OF PACKAGING TYPES, FROM THE SIMPLEST DESIGNS TO THE MOST UNIQUE AND COMPLEX CONFIGURATIONS. ”

Fausto Merli.

Purchasing Manager, Oleificio Zucchi

P.E. FOR OLEIFICIO ZUCCHI

- **Modular SL**
- 3 adhesive labelling units
- Front and back labels
- 15 heads

INTERVIEW

Sustainable, traceable, unique: this is the philosophy behind the oil that has made Zucchi an industry leader for over two centuries. Oleificio Zucchi was founded in 1810, in the Lodi area of northern Italy, as a family-run business that milled oilseeds to make food-grade oil. Since then, the company has continued to pursue values of excellence in raw materials, becoming a reference point in the production and distribution of olive oil, seed oil, flavoured oil and vinegar.

The Zucchi facility is now located in Cremona, in an area occupying 100,000 m2, with a production capacity that has risen to 1,500,000 litres/day of packaged oil, ten highly automated lines, state-of-the-art technology and widespread distribution in the retail chain and Ho.Re.Ca. channels, and within the food processing industry.

To deliver excellent oil with unchanging quality over time, Oleificio Zucchi has also created an “OIL CELLAR”, the largest temperature-controlled storage facility in Europe, with a storage capacity of about 6,000 tonnes of extra virgin olive oil with all its sensory characteristics intact.

Their shared love of quality and focus on the sustainability of products and processes led to a meeting between Oleificio Zucchi and P.E. Labellers and the start of an eighteen-year success story, geared towards the quest for excellence.

Oleificio Zucchi now owns 5 P.E. labelling machines on 5 different lines, with adhesive, hot melt and cold glue technology, used daily to label approximately 20 varieties of bottles, with over 100 types of different applications.

The common goal: flexibility and accuracy in labelling each bottle, to optimise the company's production processes and put perfect products on the supermarket shelves.
